

FirstKnock Strategic Feature Roadmap

FirstKnock Sales OS

Strategic Feature Roadmap — 12-Month Execution Plan

Q2 2026

Stack: React 18 · Vite · TanStack Query · Leaflet · Base44 BaaS · Deno Cloud Functions · Stripe Billing

Table of Contents

1. Executive Summary
2. Category 1: Data Moat Deepening
3. 1.1 Homeowner Contact Enrichment (P0)
4. 1.2 Homeowner Equity / LTV Scoring (P0)
5. 1.3–1.11 Additional Data Features (P1–P2)
6. Category 2: Route Intelligence Upgrades
7. 2.1 Door Answer Probability Model (P0)
8. 2.2 Adaptive Route Reordering (P0)
9. 2.3–2.8 Additional Route Features (P1–P2)
10. Category 3: AI/ML Acceleration
11. 3.1 Objection Pattern Detection (P0)
12. 3.2–3.8 Additional AI Features (P1–P2)
13. Category 4: Rep Experience & Virality
14. 4.1 Personal Earnings Tracker (P0)
15. 4.2 Streak / Achievement System (P0)
16. 4.3 Shareable Performance Stats Card (P0)
17. 4.4–4.7 Additional Rep Features (P1–P2)
18. Category 5: Manager Command Center
19. 5.1 Live Rep Heatmap (P0)
20. 5.2 Automated Performance Reports (P0)
21. 5.3–5.7 Additional Manager Features (P1–P2)
22. Category 6: Integration & Ecosystem
23. 6.1 Google Calendar / Outlook Sync (P0)
24. 6.2 Twilio SMS Reminders (P0)
25. 6.3–6.7 Additional Integrations (P1–P2)
26. Category 7: Monetization Levers
27. 7.1 Contact Data Add-On (P0)
28. 7.2–7.5 Additional Monetization (P1–P2)
29. 12-Month Roadmap Timeline
30. Q1: Foundation & Rep Acquisition
31. Q2: Intelligence & Ecosystem
32. Q3: Scale & Moat Deepening
33. Q4: Enterprise & Platform
34. Prioritization Rationale Summary

FirstKnock has a defensible technical foundation: a 3-step property validation pipeline, H3 spatial indexing, real-time WebSocket double-knock prevention, and offline-first architecture. The competitive moat is real but narrow — SalesRabbit and SPOTIO are well-funded and moving fast. This roadmap is built around one thesis: win the individual rep first, then lock in the manager, then own the enterprise.

Core Thesis: FirstKnock wins by being the tool that makes individual reps more money. Every P0 decision traces back to rep earnings, rep efficiency, or rep pride. Managers follow the reps. Enterprise follows the managers.

P0 decisions are justified by one or more of three criteria: (1) direct revenue impact, (2) viral rep acquisition, or (3) closing a gap that causes churn to SalesRabbit today. Features that are valuable but don't meet two criteria were pushed to P1 or P2. The roadmap is sequenced so that P0 features in Q1 unlock P1 features in Q2.

14P0 Features (Q1)	25+P1 Features (Q2)	12P2 Features (Q3–Q4)	7Feature Categories
--------------------	---------------------	-----------------------	---------------------

Competitive Landscape Overview

Table 1 — Competitive Feature Matrix (Available · Partial · Not Available · On Roadmap)

Capability	FirstKnock	SalesRabbit	SPOTIO	Knockio
3-Step Property Validation Pipeline	Unique			
H3 Spatial Indexing	Unique			
Real-Time Double-Knock Prevention		Partial		
Offline-First Architecture		Partial		
Live Rep GPS Heatmap	Roadmap			
CRM Integration (Salesforce/HubSpot)	Roadmap	60+ integrations		Limited
E-Signature / Digital Contracts	Roadmap			Primary differentiator

Contact Data Enrichment	Roadmap (P0)	Paid add-on		
AI Coaching / Objection Detection	Roadmap (P0)	Generic tips		
Equity / LTV Scoring	Roadmap (P0)			
Shareable Rep Stats Cards	Roadmap (P0)			
Streak / Gamification System	Roadmap (P0)	Basic leaderboard		

Category 1: Data Moat Deepening

Strategy: The 3-step validation pipeline is FirstKnock's core differentiator. Every feature in this category extends that moat by making the underlying property intelligence richer, more actionable, and harder for competitors to replicate without the same API stack.

1.1 Homeowner Contact Enrichment (Phone/Email Append)

Priority	P0 — Ship in Q1
-----------------	-----------------

Estimated Dev Time	2–3 weeks
---------------------------	-----------

Implementation Complexity	Medium
----------------------------------	--------

Monetization Unlock	Contact Data Add-On (7.1) — \$15–25/month per rep
----------------------------	---

Integrate Whitepages Pro or TrueLayer API to append verified phone numbers and email addresses to MasterProperty records. Reps see a "Contact" button on any validated property that reveals the homeowner's phone/email. Data is fetched on-demand and cached to MasterProperty. Supports pre-knock outreach and follow-up sequences.

- Why P0: This is the #1 feature request in D2D sales tools. SalesRabbit charges extra for it.
- Competitive Edge: Contact data is only surfaced on properties that already passed the 3-step filter — eliminating wasted outreach that competitors can't match.
- Implementation: Whitepages Pro REST API; append call triggered on property detail view; store phone/email fields in MasterProperty; gate behind add-on billing flag in Stripe.

1.2 Homeowner Equity / LTV Scoring

Priority	P0 — Ship in Q1
----------	-----------------

Estimated Dev Time	2 weeks
--------------------	---------

Implementation Complexity	Medium
---------------------------	--------

Calculate an Equity Score (0–100) for each property using: (current estimated value from RentCast) - (estimated remaining mortgage balance derived from purchase price times years owned times amortization curve). Surface as a dollar estimate on the property card. High-equity homeowners are prime targets for solar, roofing, HVAC, and windows — they have skin in the game and financing capacity.

First-Mover Advantage: No competitor currently surfaces equity scores in the canvassing UI. RentCast already provides estimated value; purchase price and date available via BatchData — this is deterministic math on existing data with zero new API costs.

1.8 Days-Since-Last-Knock Field

Priority	P0 — Ship in Q1
----------	-----------------

Estimated Dev Time	3–5 days
--------------------	----------

Implementation Complexity	Low
---------------------------	-----

Add a DaysSinceLastKnock computed field to MasterProperty, derived from InteractionLog. Surface on property card and use in route optimization to deprioritize recently knocked doors. Already partially supported by double-knock prevention — this extends it to a full temporal signal. Zero new infrastructure required. Immediately improves rep efficiency and reduces the #1 rep

complaint: "I keep going back to the same doors."

Data Moat Features — Full Priority Matrix

Table 2 — Category 1: Data Moat Features Prioritized

Feature	Priority	Dev Time	Complexity	Key Data Source	Competitive Impact
1.1 Contact Enrichment (Phone/Email)	P0	2–3 wks	Medium	Whitepages Pro / TrueLayer	Beats SalesRabbit add-on pricing
1.2 Equity / LTV Scoring	P0	2 wks	Medium	RentCast + BatchData	First-mover — no competitor has this
1.8 Days-Since-Last-Knock	P0	3–5 days	Low	InteractionLog (existing)	Eliminates top rep complaint
1.3 Ownership Tenure Scoring	P1	1 wk	Low	BatchData purchase date	Deeper than SalesRabbit/S POTIO signals
1.11 Absentee Owner Flag	P1	1–2 wks	Low-Med	BatchData mailing address	Unique pitch mode adaptation
1.4 Neighborhood Heat Velocity	P1	2–3 wks	Medium	RentCast + H3 index	Unique to FirstKnock H3 architecture
1.6 Storm / Weather Overlay	P1	2–3 wks	Medium	NOAA / CoreLogic / Tomorrow.io	Targets SalesRabbit roofing users
1.5 Building Permit Data	P1	3–4 wks	Med-High	BuildZoom / BatchData	No competitor offers permit data
1.7 HOA Data Layer	P2	2–3 wks	Medium	BatchData / HOA boundaries	High-value for solar/roofing verticals
1.9 Competitor Activity Signals	P2	2–3 wks	Medium	Crowdsourced (rep network)	Network effect moat

1.10 Foreclosure / Pre-Foreclosure	P2	2 wks	Medium	BatchData / ATTOM	Distressed property vertical targeting
--	----	-------	--------	----------------------	---

Category 2: Route Intelligence Upgrades

Strategy: The 2-opt TSP optimizer is table stakes. The next generation of route intelligence is probabilistic — routing reps not just to the nearest door, but to the highest-probability door at the right time.

2.1 Door Answer Probability Model by Time + Day + Neighborhood

Priority	P0 — Ship in Q1
-----------------	-----------------

Estimated Dev Time	3–4 weeks
---------------------------	-----------

Implementation Complexity	Medium
----------------------------------	--------

Train a lightweight ML model on InteractionLog data (timestamp, day_of_week, H3 hex, outcome: answered/not_answered) to predict the probability of a door being answered at any given time. Surface as a real-time "Answer Probability" score on each property during route planning. Integrate into route optimizer as a time-weighted scoring factor.

- Why P0: FirstKnock already has the InteractionLog data — this is a pure ML feature on existing data with no new APIs.
- Implementation: Logistic regression or gradient boosting on InteractionLog; trainLeadPredictor cloud function already exists; add AnswerProbability to route scoring; retrain weekly via Deno cron.
- Downstream Unlocks: Enables 2.4 Golden Hour Optimization, 3.4 Smart Follow-Up Timing, and 3.3 No-Show Prediction.

2.2 Adaptive Route Reordering (Real-Time GPS)

Priority	P0 — Ship in Q1
Estimated Dev Time	2–3 weeks
Implementation Complexity	Medium

As a rep moves through their route, continuously reorder remaining stops based on current GPS position, updated answer probability scores, and real-time traffic. Replaces static route generation with a dynamic, rolling optimization that updates every 5 minutes or on significant position change. Static routes become suboptimal within 30 minutes of starting — reps manually deviate and lose the optimization benefit.

Competitive Differentiation: SalesRabbit's route optimization is static post-generation. Real-time reordering keeps the route optimal throughout the entire field day — a meaningful UX and efficiency differentiator that reps will feel immediately.

Route Intelligence Features — Full Priority Matrix

Table 3 — Category 2: Route Intelligence Features Prioritized

Feature	Priority	Dev Time	Complexity	Key Dependency	Competitive Impact
2.1 Door Answer Probability Model	P0	3–4 wks	Medium	InteractionLog (existing)	Leapfrogs SalesRabbit AI routing
2.2 Adaptive Route Reordering	P0	2–3 wks	Medium	GPS + 2.1 model	Beats SalesRabbit static routing
2.3 Multi-Rep Voronoi Splitting	P1	3–4 wks	Med-High	H3 hex grid	More precise than SPOTIO territory split
2.4 Golden Hour Optimization	P1	1–2 wks	Low-Med	Requires 2.1 first	Extends KnockTimeBanner to active
2.5 Traffic-Aware Routing	P1	2–3 wks	Medium	Google Maps Routes API	Closes gap vs. Badger Maps

2.6 Weather-Aware Routing	P1	1–2 wks	Low-Med	Tomorrow.io / OpenWeather Map	No competitor offers this
2.7 Neighborhood Saturation Detection	P1	1–2 wks	Low-Med	InteractionLog + H3 hex	Unique to FirstKnock H3 architecture
2.8 Competitor Territory Avoidance	P2	1 wk	Medium	Requires 1.9 first	Reduces wasted knocks on competitor-hit zones

Category 3: AI/ML Acceleration

Strategy: FirstKnock already has generateCoachingTips and trainLeadPredictor. The AI layer should evolve from static tips to a dynamic coaching system that learns from every rep interaction and compounds in value over time.

3.1 Objection Pattern Detection from InteractionLog

Priority	P0 — Ship in Q1
Estimated Dev Time	3–4 weeks
Implementation Complexity	Medium

Parse raw_input_text from InteractionLog using GPT-4o via cloud function to extract and categorize objections (price, timing, "already have it," "not interested," HOA restrictions, etc.). Build an ObjPatternLibrary entity that tracks objection frequency by neighborhood, vertical, and rep. Surface top objections to reps before they knock a street.

- Why P0: This transforms passive interaction logging into active coaching intelligence. The data is already being collected — this is pure value extraction.
- AI Moat: No competitor does LLM-based objection extraction from field notes. This is a genuine first-mover AI advantage.
- Downstream Unlocks: Enables 3.2 Rep Voice Coaching, 3.4 Smart Follow-Up Timing, and the 7.3 AI Coaching Subscription Tier.

Table 4 — Category 3: AI/ML Features Prioritized

Feature	Priority	Dev Time	Complexity	Key Dependency	Strategic Value
3.1 Objection Pattern Detection	P0	3–4 wks	Medium	GPT-4o API + InteractionLog	Foundation of AI coaching moat
3.2 Rep Voice Coaching (Personalized)	P1	2–3 wks	Medium	Requires 3.1 first	Personalized vs. SalesRabbit generic tips
3.3 Predictive No-Show Scoring	P1	3 wks	Medium	AppointmentLog history	Reduces #1 rep frustration: wasted drive time
3.4 Smart Follow-Up Timing	P1	1–2 wks	Low-Med	Requires 2.1 first	Extends answer probability to follow-up workflow
3.5 Lead Score Evolution Tracking	P1	2–3 wks	Medium	MasterProperty + Deno cron	Dynamic scores vs. static competitor scores
3.6 Territory Saturation Forecasting	P2	2 wks	Medium	InteractionLog velocity	Proactive territory expansion planning
3.7 Automated A/B Pitch Testing	P2	4–6 wks	High	Pitch variant assignment logic	Data-driven pitch optimization
3.8 Churn Prediction for Rep Retention	P2	3 wks	Medium	Rep activity logs	Proactive manager intervention before rep leaves

Category 4: Rep Experience & Virality

Strategy: Individual reps are the primary acquisition channel. Features that make reps feel

successful, competitive, and proud of their stats will drive word-of-mouth growth. Every feature here should be shareable.

4.1 Personal Earnings Tracker

Priority	P0 — Ship in Q1
Estimated Dev Time	2–3 weeks
Implementation Complexity	Low-Medium

Display a real-time earnings dashboard for each rep showing: \$ earned today (based on commission rate configured by manager), \$ per knock (efficiency metric), projected monthly income at current pace, and earnings vs. last week. Commission rates configurable per vertical and deal type.

Viral Acquisition Driver: Money is the #1 motivator for D2D reps. Showing earnings in real-time keeps them knocking. Reps will show this screen to other reps — zero-cost viral acquisition. Neither SalesRabbit nor SPOTIO has an earnings tracker.

4.2 Streak / Achievement System

Priority	P0 — Ship in Q1
Estimated Dev Time	1–2 weeks
Implementation Complexity	Low

Extend the existing leaderboard with a streak system: Daily Knock Streak (consecutive days with >X knocks), Weekly Close Streak, Personal Best badges (most knocks in a day, fastest close, highest lead score property closed). Streaks displayed prominently on rep home screen. Breaking a streak triggers a motivational push notification. This is the Duolingo model applied to D2D sales — streaks create daily active engagement that static leaderboards don't.

4.3 Shareable Performance Stats Card

Priority	P0 — Ship in Q1
Estimated Dev Time	2 weeks
Implementation Complexity	Low-Medium

Generate a shareable image card (Instagram/LinkedIn story format) showing a rep's weekly stats: knocks, closes, close rate, earnings, streak. One-tap share to social media or copy to clipboard. This is the Spotify Wrapped model for D2D sales — every shared card is a FirstKnock ad. No competitor has shareable stats cards. Implementation via HTML Canvas or server-side image render with share sheet integration.

Rep Experience Features — Full Priority Matrix

Table 5 — Category 4: Rep Experience & Virality Features Prioritized

Feature	Priority	Dev Time	Complexity	Acquisition Model	Retention Impact
4.1 Personal Earnings Tracker	P0	2–3 wks	Low-Med	Viral — reps show other reps	High — money motivation
4.2 Streak / Achievement System	P0	1–2 wks	Low	Daily engagement driver	High — Duolingo model
4.3 Shareable Stats Card	P0	2 wks	Low-Med	Social media organic reach	Medium — pride/identity
4.4 Rep-to-Rep Referral	P1	2–3 wks	Medium	Paid referral channel	Medium — financial incentive
4.5 Social Proof Feed	P1	1–2 wks	Low-Med	Community energy	Medium — ambient motivation
4.6 Beat Your Best Challenges	P1	1–2 wks	Low-Med	Personalized engagement	High — personal competition
4.7 Rep Community Features	P2	6–8 wks	High	Network effects	Very High — community lock-in

Strategy: Managers are the economic buyers. Features that give managers visibility, control, and ROI proof will drive enterprise deals and seat expansion.

5.1 Live Rep Heatmap (Real-Time GPS)

Priority	P0 — Ship in Q1
Estimated Dev Time	2–3 weeks
Implementation Complexity	Medium

Real-time map showing GPS positions of all active reps as animated dots on the territory map. Color-coded by status (knocking, driving, idle, offline). Manager can tap any rep to see their current property, today's stats, and last interaction. Updates via existing WebSocket infrastructure. This is the #1 manager request in D2D tools — it replaces the "where is my team?" phone call and directly justifies the manager seat cost.

Parity Gap: SPOTIO and SalesRabbit both have live tracking. This is table stakes for manager retention and must be shipped in Q1. The existing WebSocket infrastructure makes this achievable without new backend architecture.

5.2 Automated Performance Reports (Weekly Email Digest)

Priority	P0 — Ship in Q1
Estimated Dev Time	2 weeks
Implementation Complexity	Low-Medium

Weekly automated email to managers summarizing: team knocks, closes, close rates, top performers, underperformers, territory coverage %, and week-over-week trends. Generated by Deno cron function. Configurable metrics and recipients. PDF attachment option. Managers who see ROI data weekly are 3x less likely to churn — this is a retention feature disguised as a reporting feature.

Table 6 — Category 5: Manager Command Center Features Prioritized

Feature	Priority	Dev Time	Complexity	Manager Value	Enterprise Impact
5.1 Live Rep Heatmap	P0	2–3 wks	Medium	Replaces 'where is my team?' calls	Parity with SPOTIO/Sales Rabbit
5.2 Automated Performance Reports	P0	2 wks	Low-Med	Weekly ROI proof delivery	Reduces manager churn 3x
5.3 Rep Coaching Queue	P1	2–3 wks	Medium	Data-driven underperformer flagging	No competitor has automated coaching queue
5.4 Territory ROI Calculator	P1	2–3 wks	Medium	Justifies FirstKnock cost to CFO	Strategic planning for enterprise buyers
5.5 Territory War Room View	P1	2–3 wks	Medium	Mission control for sales offices	Word-of-mouth among sales managers
5.6 Door-to-Door Video Proof	P2	4–5 wks	High	Compliance documentation	Required for enterprise canvass contracts
5.7 Competitive Territory Intelligence	P2	2 wks	Medium	Strategic territory decisions	Unique crowdsourced intelligence layer

Category 6: Integration & Ecosystem

Strategy: Integrations reduce churn by embedding FirstKnock into existing workflows. Prioritize integrations that enterprise buyers already have and that close parity gaps with SalesRabbit's 60+ integration catalog.

Table 7 — Category 6: Integration & Ecosystem Features Prioritized

Feature	Priority	Dev Time	Complexity	API / Provider	Strategic Rationale
6.1 Google Calendar / Outlook Sync	P0	3–4 wks	Medium	Google Calendar API + Microsoft Graph	Parity gap — absence causes churn
6.2 Twilio SMS Appointment Reminders	P0	1–2 wks	Low-Med	Twilio API	Reduces no-shows 30–50%; enables 3.3
6.3 Salesforce / HubSpot CRM Integration	P1	6–8 wks	High	Salesforce REST + HubSpot API	Required to win every enterprise evaluation
6.4 DocuSign / HelloSign E-Signature	P1	4–5 wks	Med-High	DocuSign or HelloSign API	Directly neutralizes Knockio's primary differentiator
6.5 Zapier Webhook Support	P1	3–4 wks	Medium	Zapier Developer Platform	Closes 60-integration gap at fraction of dev cost
6.6 Slack Notifications for Manager Alerts	P2	1 wk	Low	Slack Incoming Webhooks	Embeds FirstKnock in manager daily workflow
6.7 Open API for Enterprise Customers	P2	6–8 wks	High	REST API + OpenAPI spec	Enables custom integrations and data warehouse connections

CRM Integration is the single most important enterprise deal-closer. Without Salesforce/HubSpot sync, FirstKnock loses to SalesRabbit on every enterprise evaluation. Start in Q2, ship by end of Q2.

Category 7: Monetization Levers

Strategy: FirstKnock's pricing should follow a land-and-expand model — low barrier to entry for individual reps, high-value add-ons that expand ARPU as reps and managers see ROI. The Stripe

billing infrastructure is already in place.

Table 8 — Category 7: Monetization Levers and Add-On Tiers

Add-On / Tier	Priority	Price Point	Bundled Features	Target Segment	Dev Time
7.1 Contact Data Add-On	P0	\$15–25/mo per rep	Feature 1.1 (phone/email enrichment)	All verticals	1 wk (after 1.1)
7.2 Premium Territory Data Add-On	P1	\$20–35/mo per rep	1.4 Heat Velocity, 1.5 Permits, 1.6 Storm, 1.10 Foreclosure	Roofing, Solar	1 wk (after data features)
7.3 AI Coaching Subscription Tier	P1	\$25–40/mo per rep	3.1 Objection Detection, 3.2 Voice Coaching, 3.3 No-Show Prediction, 3.4 Follow-Up Timing	All verticals	1 wk (after AI features)
7.4 White-Label for D2D Training	P2	Custom ACV	Full platform with custom branding + domain	Smart Circle, Cydcor, D2D Experts	8–10 wks
7.5 Data Marketplace	P2	Custom pricing	Anonymized territory performance data	Training companies, market researchers	10–12 wks

ARPU Expansion Path: Base plan (\$49/mo) → Contact Data Add-On (+\$25) → Premium Territory Data (+\$35) → AI Coaching Tier (+\$40) = potential \$149/mo per rep. At 100 reps, that's \$14,900 MRR from a single enterprise account.

12-Month Roadmap Timeline

Q1 (Months 1–3): Foundation & Rep Acquisition

Theme: Close the parity gaps that cause churn; launch the viral rep acquisition engine.

Table 9 — Q1 Must-SHIP Features (14 items)

Feature	Category	Dev Time	Strategic Rationale
1.1 Homeowner Contact Enrichment	Data Moat	2–3 wks	Unlocks 7.1 monetization; #1 D2D feature request
1.2 Equity / LTV Scoring	Data Moat	2 wks	Deepens lead quality moat; no competitor has this
1.8 Days-Since-Last-Knock	Data Moat	3–5 days	Zero-cost data model improvement; eliminates top rep
2.1 Door Answer Probability Model	Route Intelligence	3–4 wks	complaint Core ML differentiator; pure value on existing data
2.2 Adaptive Route Reordering	Route Intelligence	2–3 wks	Beats SalesRabbit static routing; immediate rep
3.1 Objection Pattern Detection	AI/ML	3–4 wks	productivity gain AI moat foundation; unlocks entire coaching feature tree
4.1 Personal Earnings Tracker	Rep Experience	2–3 wks	Rep retention anchor; viral acquisition driver
4.2 Streak / Achievement System	Rep Experience	1–2 wks	Daily engagement driver; Duolingo model for D2D
4.3 Shareable Stats Card	Rep Experience	2 wks	Zero-cost viral acquisition; Spotify Wrapped for D2D
5.1 Live Rep Heatmap	Manager Command	2–3 wks	Manager retention anchor; parity with SPOTIO/SalesRabbit
5.2 Automated Performance Reports	Manager Command	2 wks	Manager ROI proof; 3x churn reduction
6.1 Google Calendar / Outlook Sync	Integrations	3–4 wks	Parity gap closure; absence is active churn driver
6.2 Twilio SMS Reminders	Integrations	1–2 wks	30–50% no-show reduction; enables 3.3 no-show prediction

7.1 Contact Data Add-On	Monetization	1 wk	First ARPU expansion; gates 1.1 behind paid tier
-------------------------	--------------	------	--

14Q1 Features	+40%Target DAU Increase	>50Target Manager NPS	\$25/moFirst Add-On Revenue
---------------	-------------------------	-----------------------	-----------------------------

Q2 (Months 4–6): Intelligence & Ecosystem

Theme: Build the data moat; close the integration gap with SalesRabbit.

- Data Moat (P1): 1.3 Ownership Tenure Scoring, 1.4 Neighborhood Heat Velocity, 1.5 Building Permit Data, 1.6 Storm/Weather Overlay, 1.11 Absentee Owner Flag
- Route Intelligence (P1): 2.3 Multi-Rep Voronoi Splitting, 2.4 Golden Hour Optimization, 2.5 Traffic-Aware Routing, 2.6 Weather-Aware Routing, 2.7 Neighborhood Saturation Detection
- AI/ML (P1): 3.2 Rep Voice Coaching, 3.3 No-Show Prediction, 3.4 Smart Follow-Up Timing
- Rep Experience (P1): 4.4 Rep-to-Rep Referral Bonuses, 4.5 Social Proof Feed, 4.6 Beat Your Best Challenges
- Manager Command (P1): 5.3 Rep Coaching Queue, 5.4 Territory ROI Calculator, 5.5 Territory War Room View
- Integrations (P1): 6.3 Salesforce/HubSpot CRM (start Q2, ship by end of Q2), 6.4 DocuSign E-Signature, 6.5 Zapier Webhooks
- Monetization (P1): 7.2 Premium Territory Data Add-On, 7.3 AI Coaching Subscription Tier

25+Q2 Features	3Target Enterprise Accounts	+35%Target ARPU Increase	KnockioChurn-To Cases Documented
----------------	-----------------------------	--------------------------	----------------------------------

Q3 (Months 7–9): Scale & Moat Deepening

Theme: Extend the data moat; build network effects.

- Data Moat (P2): 1.7 HOA Data Layer, 1.9 Competitor Activity Signals, 1.10 Foreclosure/Pre-Foreclosure Data
- Route Intelligence (P2): 2.8 Competitor Territory Avoidance (depends on 1.9)
- AI/ML (P1–P2): 3.5 Lead Score Evolution Tracking, 3.6 Territory Saturation Forecasting, 3.7 A/B Pitch Testing, 3.8 Churn Prediction
- Rep Experience (P2): 4.7 Rep Community Features
- Manager Command (P2): 5.6 Video Proof, 5.7 Competitive Territory Intelligence
- Integrations (P2): 6.6 Slack Notifications

>20%Rep Community DAU	5+Markets with Competitor Intel	12Q3 Features	H3 HexSaturation Tracking Active
--------------------------	------------------------------------	---------------	-------------------------------------

Q4 (Months 10–12): Enterprise & Platform

Theme: Build the platform layer; unlock enterprise and white-label revenue.

- Integrations (P2): 6.7 Open API for Enterprise Customers
- Monetization (P2): 7.4 White-Label for D2D Training Companies, 7.5 Data Marketplace
- Enterprise Infrastructure: SSO / SAML authentication, advanced admin controls and audit logs, SLA-backed uptime guarantees
- Platform Hardening: Multi-tenant architecture review, data privacy compliance audit, developer portal launch

1+White-Label Partner Signed	3+Enterprise API Customers	ARRMilestone Target Hit	SSOEnterprise Auth Live

Full 12-Month Feature Timeline at a Glance

Table 10 — 12-Month Roadmap Summary by Quarter

Quarter	Theme	P0 Features	P1 Features	P2 Features	Key Milestone
Q1 (Mo 1–3)	Foundation & Rep Acquisition	14	0	0	Contact data add-on revenue live; manager NPS >50
Q2 (Mo 4–6)	Intelligence & Ecosystem	0	25+	0	3 enterprise accounts; ARPU +35%; Knockio churn cases
Q3 (Mo 7–9)	Scale & Moat Deepening	0	1	11	Rep community DAU >20%; competitor intel in 5+ markets

Q4 (Mo 10–12)	Enterprise & Platform	0	0	3+	First white-label partner; API in use by 3+ enterprise customers
---------------	-----------------------	---	---	----	--

Prioritization Rationale Summary

Every P0 in this roadmap satisfies at least two of three criteria. Features that are valuable but don't meet two criteria were pushed to P1 or P2.

Table 11 — P0 Prioritization Criteria Framework

P0 Criterion	Definition	Example Features
1. Closes a Churn-Causing Gap	Absence of this feature is actively driving reps or managers to SalesRabbit/SPOTIO today	Calendar sync (6.1), Live rep heatmap (5.1), SMS reminders (6.2)
2. Drives Viral Rep Acquisition	Feature is inherently shareable or creates word-of-mouth among rep networks	Earnings tracker (4.1), Streak system (4.2), Shareable stats card (4.3)
3. Extends Core Data Moat at Zero New Infrastructure Cost	Feature uses existing APIs, entities, or data — pure value extraction	Equity scoring (1.2), Days-since-last-knock (1.8), Answer probability model (2.1)

Feature Dependency Chain

The roadmap is sequenced so that P0 features in Q1 unlock P1 features in Q2, which unlock P2 features in Q3. This dependency chain ensures no feature is built in isolation and every investment compounds.

1. Contact Enrichment (1.1) → Contact Data Add-On (7.1) → ARPU expansion
2. Answer Probability Model (2.1) → Golden Hour Optimization (2.4) → Smart Follow-Up Timing (3.4)
3. Objection Pattern Detection (3.1) → Rep Voice Coaching (3.2) → AI Coaching Tier (7.3)
4. Competitor Activity Signals (1.9) → Competitor Territory Avoidance (2.8) → Competitive Territory Intelligence (5.7)
5. No-Show Prediction (3.3) → Twilio SMS High-Risk Reminders (6.2) → Appointment conversion improvement

6. Permit Data (1.5) + Storm Overlay (1.6) + Heat Velocity (1.4) rightarrow Premium Territory Data Add-On (7.2)
7. Churn Prediction (3.8) rightarrow Rep Coaching Queue (5.3) rightarrow Manager-driven rep retention

The Core Thesis — Restated

FirstKnock wins by being the tool that makes individual reps more money. Every P0 decision traces back to rep earnings, rep efficiency, or rep pride. Managers follow the reps. Enterprise follows the managers. The 3-step validation pipeline is the moat — every roadmap category deepens it, extends it, or monetizes it.
