## EXECUTIVE SUMMARY

FirstKnock is the unfair advantage for door-to-door sales teams. While every other rep is spraying and praying across apartment complexes and rental neighborhoods, FirstKnock reps are walking up to doors where the ink on the mortgage is still wet — verified, recently sold homes where the homeowner just moved in and is actively buying everything from pest protection to security systems.

This document is the complete go-to-market playbook: the hooks that stop thumbs mid-scroll, the emails that get replies from operators who delete everything, the call scripts that book demos in 60 seconds, and the automation stack that turns one win into 20 pieces of content without hiring a single person.

This is not a strategy deck. This is a weapon.

## MODULE A: CORE MESSAGING & HOOKS

### A1. Five Scroll-Stopping Social Media Hooks

Table A1 — Five Scroll-Stopping Social Media Hooks

| Hook # | Name                  | Full Hook Copy                                                                                                                                                                                |
|--------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hook 1 | The Rental Trap       | "You just knocked 47 doors. 31 were renters. Your rep quit on the drive home. Congrats, you played yourself."                                                                                 |
| Hook 2 | The Cheat Code        | "What if every door you knocked today was a homeowner who literally just moved in last week? That's not a fantasy. That's FirstKnock."                                                        |
| Hook 3 | The Math Doesn't Lie  | "100 cold doors. 12 homeowners. 3 interested. 1 close. OR — 10 verified new homeowners. 4 interested. 2 closes. Same hours. Different map."                                                   |
| Hook 4 | The Rep Churn Reality | "Your best rep didn't quit because of the money. He quit because you sent him to knock a street where 60% of the houses were rentals and he felt like an idiot. Fix the data, fix the churn." |
| Hook 5 | The Status Play       | "There are two types of D2D teams right now: ones using verified sold-home data, and ones losing to them. Which map are your reps walking?"                                                   |

## A2. Three Value Proposition Frameworks

### Framework 1: Pain Agitation Framework — The True Cost of Knocking Dead Doors

**THE SETUP:** Every D2D manager thinks their biggest problem is closing rate. It's not. It's door quality. And door quality is silently destroying your business in three ways you're probably not tracking.

#### Pain Point 1 — The Time Hemorrhage

The average D2D rep knocks 80–120 doors per day. In a typical residential territory, 35–50% of those doors are rentals. That means your rep is spending nearly half their day knocking on doors where the person who answers literally cannot say yes. They don't own the home. They can't buy pest control. They can't authorize a security system install. They are a dead end wearing a human

face.

Do the math: if a rep knocks 100 doors and 40 are rentals, that's 40 wasted approaches. At an average of 3–4 minutes per door (walk, knock, pitch, rejection), that's 2+ hours of your rep's peak selling time vaporized. Every. Single. Day.

**Pain Point 2 — The Money Drain**

Wasted doors aren't just a time problem — they're a commission problem, a morale problem, and a retention problem. A rep who spends half their day getting rejected by people who can't buy anything doesn't just underperform. They leave. The average D2D sales rep costs \$3,000–\$8,000 to recruit, onboard, and train. When they quit after 60 days because the doors were garbage, that cost is pure waste. And the next rep you hire walks into the same bad territory with the same bad data and the cycle repeats.

**Pain Point 3 — The Accountability Black Hole**

Without GPS proof-of-visit and real-time team visibility, managers are flying blind. You don't know if your rep actually knocked the route you assigned. You don't know which streets are converting and which are dead. You're making territory decisions based on gut feel and anecdote. Meanwhile, your competitor just deployed a team with heatmap data and route optimization and they're systematically picking off every new homeowner in your market before your reps even find the street.

THE AGITATIONCLOSE: This isn't bad luck. This is a data problem. And data problems have data solutions. The question is whether you fix it now or keep watching your best reps burn out on bad doors while your competitors eat your market.

**Framework 2: ROI Contrast Framework — Old Way vs. FirstKnock Way**

**Table A2 — Old Way vs. FirstKnock Way: Full Metric Comparison**

| Metric                                             | Old Way | FirstKnock Way                  |
|----------------------------------------------------|---------|---------------------------------|
| Doors knocked per day                              | 100     | 100% verified homeowners on map |
| % that are rentals                                 | ~40%    | 0% — rentals are filtered out   |
| Actual homeowner doors                             | 60      | 100% of doors knocked           |
| % recently moved in (high intent)                  | ~8%     | 100% — that's the filter        |
| High-intent homeowner doors per day                | ~5      | 40–60                           |
| Closes per day (avg 20% close rate on high-intent) | ~1      | 8–12                            |

|                                      |                        |                                                      |
|--------------------------------------|------------------------|------------------------------------------------------|
| Rep hours wasted on dead doors       | 3–4 hrs/day            | Near zero                                            |
| Route planning time                  | 30–45 min/day (manual) | Instant — system generates optimized walking route   |
| Manager visibility into rep activity | Zero (honor system)    | Real-time GPS, heatmaps, conversion data             |
| Data on why doors didn't convert     | None                   | Full history, previous visit notes, outcome tracking |

THE CONTRAST STATEMENT: Old way: 100 doors, 1 close, 3 hours wasted, rep considers quitting. FirstKnock way: 40 doors, 8 closes, zero wasted approaches, rep texts you asking for more territory. Same rep. Same pitch. Different map. That's the entire game.

### Vertical-Specific ROI — Pest Control

New homeowners are 3–5x more likely to sign a pest control contract in their first 90 days than established residents. They're dealing with unknown pest history in a new home. They're anxious. They're buying. A FirstKnock-equipped pest control rep isn't just knocking doors — they're walking up to the highest-probability buyers in the entire market at the exact moment they're most likely to say yes.

### Vertical-Specific ROI — Smart Home Security

New homeowners are the #1 buyer segment for home security systems. Moving into a new home triggers a security audit mindset — unfamiliar neighborhood, unknown history, new family to protect. A security rep with FirstKnock data isn't cold calling. They're showing up at the exact right door at the exact right time with a pitch that practically writes itself: "You just moved in — let's make sure your family is protected from day one."

## Framework 3: Identity/Status Framework — The Elite Closer's Unfair Advantage

### The Positioning

FirstKnock isn't software. It's a signal. When your reps are using FirstKnock, they're not just better equipped — they're operating in a different category. They're the team that shows up to the right door at the right time with the right data. Everyone else is guessing. You're not.

### The Identity Statement

There are closers, and there are grinders. Grinders work harder. Closers work smarter. FirstKnock is what separates the two. The best D2D operators in the country aren't knocking more doors — they're knocking better doors. They've stopped competing on volume and started competing on precision. They've turned their reps from door-to-door salespeople into field intelligence operatives.

**When a FirstKnock rep walks up to a door, they already know:**

- The home sold recently (the owner is new, motivated, and buying)
- The exact address, property value, and ownership status
- Whether a teammate has visited before and what happened
- The optimized route to the next 15 doors just like it

That's not a sales rep. That's a closer with a targeting system. And the homeowner can feel the difference. Confidence reads. Precision reads. When you know you're at the right door, you pitch differently. You close differently.

**The Status Contrast**

**Table A3 — Status Contrast: Competitor Rep vs. FirstKnock Rep**

| Your Competitor's Rep                         | Your FirstKnock Rep                                      |
|-----------------------------------------------|----------------------------------------------------------|
| Knocking a rental                             | Knocking a \$480,000 home that sold 11 days ago          |
| Getting doors slammed by people who can't buy | Having a conversation with a homeowner who just moved in |
| Guessing which doors are homeowners           | Verified data on every single door before the knock      |
| Burning out on dead doors by noon             | Closing deals and asking for more territory              |

That's not luck. That's FirstKnock.

**The Team Status Play**

For managers: deploying FirstKnock isn't just a productivity decision — it's a recruiting signal. The best D2D reps in your market know the difference between a team with good data and a team without it. When you run FirstKnock, you attract the closers who want to win. You stop losing top talent to competitors who give them better tools. FirstKnock is how you build the team that everyone else is trying to poach from.

**MODULE B: SOCIAL MEDIA CONTENT ENGINE**

**B1. Four-Week Content Calendar — TikTok & Instagram Reels**

**WEEK 1: ESTABLISH THE PAIN**

**Week 1, Day 1 — Monday**

**Table B1a — Week 1 Day 1 Video Metadata**

| Element                | Detail                                                                                        |
|------------------------|-----------------------------------------------------------------------------------------------|
| Format                 | Talking Head (founder/manager style, direct to camera, dark background, neon accent lighting) |
| Hook (first 3 seconds) | "Your rep knocked 80 doors today. Want to know how many of them could actually buy from you?" |

**FULL VIDEO CONCEPT:**

1. Open on tight face shot, direct eye contact, slight smirk
2. Pause for 2 seconds after hook — let it land
3. "I'll tell you. About 40. Maybe 45 if you're lucky. The rest? Renters. Non-decision makers. People who literally cannot say yes to you no matter how good your pitch is."
4. Cut to phone screen showing a generic map with pins scattered everywhere
5. "This is what most D2D teams are working with. A list. Some pins. A prayer."
6. Cut back to face — lean in slightly
7. "And then they wonder why their reps are quitting after 60 days. It's not the pitch. It's the doors."
8. Hard cut to FirstKnock map UI — clean, dark mode, highlighted sold homes
9. "Every door on this map? Verified homeowner. Recently sold. High intent. Zero rentals."
10. Back to face: "That's the difference between a team that grinds and a team that closes."
11. End card: "FirstKnock. Know before you knock." with link in bio CTA

**ON-SCREEN TEXT OVERLAYS:**

- "80 doors knocked today" rightarrow "~40 could actually buy"
- "The rest: RENTERS. NON-OWNERS. DEAD ENDS."
- "FirstKnock: 100% verified homeowners"
- "Know before you knock rightarrow"

CAPTION: "Nobody talks about this. Your close rate isn't the problem. Your door quality is. Fix the data, fix the team. #doortodoor #d2dsales #pestcontrol #homesecurity #salesleadership #fieldops #firstknock"

HASHTAGS: #doortodoor #d2dsales #pestcontrol #homesecurity #salesleadership #fieldops #firstknock #salesmanager #closers #salestech

CTA: "Drop a if your reps are knocking too many rentals. Link in bio to see the map."

**Week 1, Day 3 — Wednesday**

**Table B1b — Week 1 Day 3 Video Metadata**

| Element                | Detail                                                                                        |
|------------------------|-----------------------------------------------------------------------------------------------|
| Format                 | POV — Rep in the Field (Pest Control vertical, handheld phone camera, walking a neighborhood) |
| Hook (first 3 seconds) | "POV: You're a pest control rep and every door on your route just sold in the last 30 days."  |

**FULL VIDEO CONCEPT:**

1. Open POV walking shot — rep's hand holding phone, FirstKnock app visible, walking a residential street
2. Voiceover (rep's voice, energetic): "Used to spend half my day knocking apartments and rentals. Manager would give me a list, I'd work it, and by noon I wanted to quit."
3. Cut to app screen — show the map with highlighted sold-home pins
4. "Now I open FirstKnock before I leave the truck. Every pin on this map? Homeowner. Recently moved in. Probably dealing with pest issues they don't even know about yet."
5. Walking up to a door — knock — door opens (actor)
6. Rep: "Hey, I'm with [Pest Control Company] — we work with a lot of the new homeowners in this area. You just moved in recently, right?"
7. Homeowner: "Yeah, about three weeks ago actually."
8. Rep smiles — knows exactly what to say next
9. Cut back to walking shot: "That's not a cold knock. That's a warm door. And I've got 40 more just like it today."
10. End on app screen with route highlighted

**ON-SCREEN TEXT OVERLAYS:**

- "POV: Every door = verified new homeowner"
- "No rentals. No non-decision makers."
- "Just moved in = highest intent buyer"
- "40 doors like this. Every. Single. Day."

CAPTION: "This is what happens when you stop spraying and start targeting. Pest control reps on FirstKnock aren't knocking cold — they're walking up to homeowners who literally just moved in and have no idea what's living in their walls yet. #pestcontrol #d2dsales #doortodoor #fieldops #salesrep #firstknock"

HASHTAGS: #pestcontrol #d2dsales #doortodoor #fieldops #salesrep #firstknock #pestcontrollife #salestips #closers

CTA: "Want to see what your territory looks like on the FirstKnock map? Link in bio."

**Week 1, Day 5 — Friday**

**Table B1c — Week 1 Day 5 Video Metadata**

| Element                | Detail                                                                  |
|------------------------|-------------------------------------------------------------------------|
| Format                 | Before/After Skit (two-person, split screen or sequential)              |
| Hook (first 3 seconds) | "Old way vs. FirstKnock way. Same rep. Same pitch. Watch what happens." |

**FULL VIDEO CONCEPT:**

1. Split screen or sequential cuts — left side labeled "OLD WAY,"right side labeled "FIRSTKNOCK WAY"
2. OLD WAY: Rep walking up to a door, knocks, person answers
3. Rep: "Hi, I'm with [Security Company], do you own this home?"
4. Person: "No, I rent."
5. Rep: "Oh — okay, sorry to bother you." [dejected walk away]
6. Text overlay: "Door 1 of 40 today. 39 to go."
7. FIRSTKNOCK WAY: Rep checks app before walking up
8. App shows: "Sold 18 days ago. Owner: [Name]. Est. value: \$425,000."
9. Rep walks up confidently, knocks
10. Person answers
11. Rep: "Hey — you just moved in a few weeks ago, right? I work with a lot of the new homeowners on this street. Got a quick second?"
12. Person: "Yeah, actually — come on in."
13. Text overlay: "That's door 1 of 10 verified homeowners today."
14. End card: "Stop knocking blind. FirstKnock."

**ON-SCREEN TEXT OVERLAYS:**

- OLD WAY: "Renter. Can't buy. Time wasted."
- FIRSTKNOCK WAY: "Verified owner. Just moved in. High intent."
- "Same rep. Same pitch. Different data."
- "FirstKnock: Know before you knock."

CAPTION: "The pitch didn't change. The door did. When you know who you're walking up to before you knock, everything changes. Confidence. Conversion. Close rate. #doortodoor #d2dsales #homesecurity #salestraining #firstknock #closers"

HASHTAGS: #doortodoor #d2dsales #homesecurity #salestraining #firstknock #closers #saleshacks #fieldops #securitysales

CTA: "Tag a D2D manager who needs to see this. Link in bio for a free demo."

**WEEK 2: SHOW THE PRODUCT**

**Week 2, Day 1 — Monday**

**Table B2a — Week 2 Day 1 Video Metadata**

| Element                | Detail                                                                                 |
|------------------------|----------------------------------------------------------------------------------------|
| Format                 | Screen Record / Tech Flex (phone screen recording with voiceover, dark mode UI)        |
| Hook (first 3 seconds) | "Let me show you what a D2D rep's phone looks like when they actually have good data." |

**FULL VIDEO CONCEPT:**

1. Open on phone screen — FirstKnock app, dark mode, map view
2. Voiceover: "This is FirstKnock. Every pin you see on this map is a home that recently sold. Verified homeowner. Not a rental. Not a non-decision maker."
3. Zoom into a cluster of pins in a neighborhood
4. "Manager draws a territory — right here — and the system instantly generates an optimized walking route. Highest-value doors, most efficient path, zero wasted steps."
5. Show route generation animation
6. "Rep opens the app, sees their route, and starts walking. Every door they knock today? Homeowner. Recently moved in. High intent."
7. Tap on a specific door pin — show property details overlay
8. "Tap any door — see when it sold, estimated value, any previous visit notes from the team."
9. Show quick-action buttons: Not Interested, Sold, Callback
10. "One thumb. In the field. No fumbling with spreadsheets or paper lists."
11. Cut to manager view — command center, team dispatch screen
12. "And back at HQ, the manager sees everything. Real-time. Who's knocking, who's converting, which streets are hot."
13. End: "This is what field intelligence looks like in 2025."

**ON-SCREEN TEXT OVERLAYS:**

- "Every pin = verified sold home"
- "Optimized route: generated instantly"
- "Property details on every door"
- "Manager sees everything. Real-time."
- "Field intelligence. Not a list."

CAPTION: "This isn't a list. This isn't a spreadsheet. This is a targeting system for D2D teams. Every door on the map = verified homeowner who just moved in. Built for pest control and security teams who are done knocking blind. #firstknock #d2dsales #salestech #doortodoor #fieldops #pestcontrol #homesecurity"

HASHTAGS: #firstknock #d2dsales #salestech #doortodoor #fieldops #pestcontrol #homesecurity #salestechnology #closers #salesleadership

CTA: "Drop your vertical below Pest control or security? I'll show you what your territory looks like."

**Week 2, Day 3 — Wednesday**

**Table B2b — Week 2 Day 3 Video Metadata**

| Element                | Detail                                                                                                |
|------------------------|-------------------------------------------------------------------------------------------------------|
| Format                 | Manager POV — Command Center Walkthrough (talking head + screen share)                                |
| Hook (first 3 seconds) | "This is what it looks like when a D2D manager actually knows what their team is doing in real time." |

## FULL VIDEO CONCEPT:

1. Open on manager at desk, laptop visible, FirstKnock command center on screen
2. "Most D2D managers are running their teams on faith. You send reps out, you hope they're knocking, you find out at end of day how it went. That's not management. That's prayer."
3. Turn to screen — show command center
4. "This is the FirstKnock command center. Every rep on my team — I can see exactly where they are, what doors they've knocked, and how they're converting. Right now. Live."
5. Point to rep rankings panel
6. "This ranks my reps by performance, distance from high-value territory, and availability. So when I need to reassign a route or push someone to a hot street, I know exactly who to send."
7. Show heatmap overlay
8. "This heatmap shows me which streets are converting and which are dead. I'm not guessing anymore. I'm making data decisions."
9. Show GPS proof-of-visit
10. "And every knock is GPS-verified. No more 'I knocked 80 doors today' with nothing to show for it. I can see every door, every timestamp, every outcome."
11. Lean back, arms crossed: "This is what accountability looks like. And it's why my team's close rate went up [X%] in the first 30 days."

## ON-SCREEN TEXT OVERLAYS:

- "Real-time team visibility"
- "GPS proof of every knock"
- "Heatmaps: know which streets convert"
- "Rank reps by performance + proximity"
- "No more managing on faith"

CAPTION: "D2D managers: you should know exactly what your team is doing right now. Not at end of day. Not in a recap call. Right now. FirstKnock command center gives you real-time GPS, conversion heatmaps, and rep rankings. This is how you build a team that actually scales.

#salesleadership #d2dsales #doortodoor #fieldops #salesmanager #firstknock"

HASHTAGS: #salesleadership #d2dsales #doortodoor #fieldops #salesmanager #firstknock  
#teammanagement #salesdashboard #pestcontrol #homesecurity

CTA: "Managers — how are you tracking your team right now? Drop it below. "

**Table B2c — Week 2 Day 5 Video Metadata**

| Element                | Detail                                                                          |
|------------------------|---------------------------------------------------------------------------------|
| Format                 | Rep Win Story — Dramatized (talking head, rep telling a story direct to camera) |
| Hook (first 3 seconds) | "I knocked 9 doors yesterday. Closed 3. Here's exactly how that happened."      |

**FULL VIDEO CONCEPT:**

1. Rep direct to camera, casual setting, high energy
2. "Okay so yesterday I had a 4-hour window to knock. Used to, I'd grab my list, pick a neighborhood, and just start walking. Hit maybe 60–70 doors, close 1 or 2 if I was lucky."
3. "Yesterday I opened FirstKnock. Pulled up my territory. Filtered for homes sold in the last 45 days. Got 9 doors in a tight 6-block radius."
4. "Nine doors. That's it. I knocked all 9 in about 2 hours."
5. "Door 1 — not home. Left a door hanger."
6. "Door 2 — couple just moved in 3 weeks ago. Hadn't even thought about pest control yet. Signed a quarterly contract on the spot."
7. "Door 3, 4 — not interested, but actual homeowners, actual conversations."
8. "Door 5 — this guy had already seen one of our door hangers from a previous visit. Remembered the company. Signed."
9. "Door 6, 7 — callbacks scheduled."
10. "Door 8 — closed."
11. "Door 9 — closed."
12. "3 closes. 9 doors. 2 hours. That's a [X%] close rate on verified doors."
13. "Old me would've knocked 60 doors and closed 1. Same pitch. Different data."
14. Shrug and smile: "FirstKnock just hits different."

**ON-SCREEN TEXT OVERLAYS:**

- "9 doors. 2 hours. 3 closes."
- "All verified homeowners. All recently moved in."
- "Door 2: signed on the spot"
- "Door 5: remembered our door hanger"
- "Doors 8 & 9: closed"
- "Same pitch. Different data. Different results."

CAPTION: "9 doors. 3 closes. 2 hours. This isn't a flex — it's what happens when you stop knocking blind and start knocking smart. Every door on the FirstKnock map is a verified homeowner who just moved in. The pitch practically writes itself. #pestcontrol #d2dsales #doortodoor #closers #saleswin #firstknock"

HASHTAGS: #pestcontrol #d2dsales #doortodoor #closers #saleswin #firstknock #salestips #fieldops #replife #grind

CTA: "What's your best close rate on a single day? Drop it below. "

Week 3, Day 1 — Monday

Table B3a — Week 3 Day 1 Video Metadata

| Element                | Detail                                                                     |
|------------------------|----------------------------------------------------------------------------|
| Format                 | Hot Take / Founder-Style Talking Head                                      |
| Hook (first 3 seconds) | "Unpopular opinion: most D2D training is useless if your data is garbage." |

FULL VIDEO CONCEPT:

1. Direct to camera, slightly confrontational energy, confident
2. "I'm going to say something that's going to upset some people in this space."
3. "You can have the best pitch in the world. You can train your reps on every objection. You can run the best morning meetings, the best ride-alongs, the best incentive programs."
4. "And if your data is garbage, none of it matters."
5. "Because you're sending elite closers to knock on doors where the person who answers literally cannot buy from you. They rent. They don't own. They can't make the decision."
6. "And your rep — your best rep — is standing there with a perfect pitch and zero chance of closing. And they feel it. And they start to wonder if they're in the wrong business."
7. "They're not in the wrong business. They're on the wrong doors."
8. "The best investment you can make in your D2D team right now isn't another training program. It's better data. Verified homeowners. Recently sold homes. High-intent buyers."
9. "Fix the doors. The closes follow."
10. Hard cut to FirstKnock logo

ON-SCREEN TEXT OVERLAYS:

- "Hot take: your training isn't the problem"
- "Your DATA is the problem"
- "Best pitch + wrong door = zero closes"
- "Fix the doors. The closes follow."

CAPTION: "I'll die on this hill. You can't train your way out of bad data. Stop sending elite reps to knock rentals and non-decision makers. Fix the doors first. Everything else follows. #d2dsales #salesleadership #doortodoor #hottake #salestruth #firstknock"

HASHTAGS: #d2dsales #salesleadership #doortodoor #hottake #salestruth #firstknock #salesmindset #closers #pestcontrol #homesecurity

Week 3, Day 3 — Wednesday

Table B3b — Week 3 Day 3 Video Metadata

| Element                | Detail                                                                                               |
|------------------------|------------------------------------------------------------------------------------------------------|
| Format                 | Day in the Life POV — Smart Home Security Rep                                                        |
| Hook (first 3 seconds) | "POV: You're a home security rep and you only knock doors where the family literally just moved in." |

### FULL VIDEO CONCEPT:

1. POV walking shot, security rep uniform, FirstKnock app visible
2. Voiceover: "New homeowners are the number one buyer for home security. They just moved into an unfamiliar neighborhood. They don't know the area. They've got a family to protect. They are actively thinking about security."
3. Show app — filter: homes sold in last 60 days, sorted by property value
4. "I filter for homes sold in the last 60 days. High-value properties first. These are the buyers."
5. Walking up to a door — nice home, recently moved-in feel (boxes visible through window, new welcome mat)
6. Knock. Door opens.
7. Rep: "Hey — welcome to the neighborhood. I work with a lot of the families who've moved in recently on this street. Quick question — have you had a chance to look at your home security setup yet?"
8. Homeowner: "Actually, no — we've been meaning to. Come on in."
9. Cut back to walking: "That's not luck. That's targeting. I knew before I knocked that this family just moved in 22 days ago. I knew they hadn't set up security yet. I knew they were a buyer."
10. Show close on app — mark door as "Sold"
11. "That's what field intelligence looks like."

### ON-SCREEN TEXT OVERLAYS:

- "New homeowners = #1 security buyers"
- "Just moved in = actively thinking about security"
- "You knew before you knocked"
- "That's not luck. That's data."

CAPTION: "New homeowners are the most motivated security buyers on the planet. They just moved into an unfamiliar neighborhood with a family to protect. FirstKnock puts security reps at those exact doors at the exact right time. This is precision targeting for D2D. #homesecurity #d2dsales #doortodoor #securitysales #firstknock #fieldops"

HASHTAGS: #homesecurity #d2dsales #doortodoor #securitysales #firstknock #fieldops #alarms #smarthome #closers #salesrep

CTA: "Security managers — what's your average close rate on new homeowner doors vs. cold doors? Drop it below."

**Table B3c — Week 3 Day 5 Video Metadata**

| Element                | Detail                                                                              |
|------------------------|-------------------------------------------------------------------------------------|
| Format                 | Skit — "The Rental Trap" (comedic but pointed)                                      |
| Hook (first 3 seconds) | "Every D2D rep has had this moment. And it's the most demoralizing thing in sales." |

**FULL VIDEO CONCEPT:**

1. Rep walks up to a door, full energy, confident
2. Knocks. Person answers.
3. Rep launches into pitch: "Hey! I'm with [Company], we work with homeowners in this area—"
4. Person: "I rent."
5. Rep: [visible deflation] "Oh. Okay. Sorry."
6. Walks to next door. Same energy. Knocks.
7. Person: "I rent."
8. Next door. "I rent."
9. Next door. "I rent."
10. Rep is now visibly defeated, sitting on a curb
11. Text overlay: "Door 12. Still looking for a homeowner."
12. Cut to: same rep, now with FirstKnock app
13. Opens app. Every pin on the map glows.
14. Text overlay: "Every pin = verified homeowner."
15. Rep stands up, new energy
16. Walks to first door. Knocks. Homeowner answers.
17. Rep: "Hey — you just moved in recently, right?"
18. Homeowner: "Three weeks ago, yeah."
19. Rep smiles. Knows exactly what happens next.
20. End card: "Stop knocking rentals. FirstKnock."

**ON-SCREEN TEXT OVERLAYS:**

- "I rent." x4 (building frustration)
- "Door 12. Still looking for a homeowner."
- [FirstKnock app appears]
- "Every pin = verified homeowner"
- "Stop knocking rentals."

CAPTION: "Every D2D rep knows this feeling. You're 12 doors in and you haven't talked to a single homeowner. It's not your pitch. It's your data. FirstKnock eliminates the rental trap. Every door on the map = verified owner. #doortodoor #d2dsales #saleshumor #pestcontrol #homesecurity #firstknock #rentalstrap"

HASHTAGS: #doortodoor #d2dsales #saleshumor #pestcontrol #homesecurity #firstknock #rentalstrap #replife #closers #fieldops

Week 4, Day 1 — Monday

Table B4a — Week 4 Day 1 Video Metadata

| Element                | Detail                                                                         |
|------------------------|--------------------------------------------------------------------------------|
| Format                 | Talking Head — "The Math" (data-driven, direct)                                |
| Hook (first 3 seconds) | "Let me show you the math that convinced me to never knock a cold door again." |

FULL VIDEO CONCEPT:

1. Direct to camera, whiteboard or on-screen graphics behind
2. "Okay. Let's talk numbers. Because this is the math that changes everything."
3. "Traditional D2D: 100 doors per day. 40% rentals = 40 dead doors. Of the 60 homeowners, maybe 8% recently moved in and are high-intent. That's 5 doors worth knocking."
4. "5 high-intent doors out of 100 knocked. And you're paying a rep for 8 hours to find those 5."
5. "FirstKnock: every door on the map is a verified homeowner who recently sold. You knock 40 doors. All 40 are high-intent. Your close rate on high-intent doors is the same — let's say 20%."
6. "Old way: 100 doors, 1 close. FirstKnock: 40 doors, 8 closes."
7. "Same rep. Same pitch. Same hours. 8x the closes."
8. "Now multiply that by a team of 10 reps. Old way: 10 closes per day. FirstKnock: 80 closes per day."
9. "That's not an incremental improvement. That's a different business."
10. Hard stare at camera: "The math doesn't lie."

ON-SCREEN TEXT OVERLAYS:

- "100 cold doors rightarrow 1 close"
- "40 FirstKnock doors rightarrow 8 closes"
- "Team of 10: 10 closes/day rightarrow 80 closes/day"
- "Same rep. Same pitch. 8x the output."
- "The math doesn't lie."

CAPTION: "I'm going to show you the math that made me realize traditional D2D is broken. 100 cold doors = 1 close. 40 FirstKnock doors = 8 closes. Same rep. Same pitch. 8x the output. This is why the best D2D teams in the country are switching. #d2dsales #salesmath #doortodoor #firstknock #pestcontrol #homesecurity #closers"

HASHTAGS: #d2dsales #salesmath #doortodoor #firstknock #pestcontrol #homesecurity #closers #salesleadership #fieldops #salestips

CTA: "Want to run this math on your own team? DM me 'MATH' and I'll send you the calculator."

Week 4, Day 3 — Wednesday

Table B4b — Week 4 Day 3 Video Metadata

| Element                | Detail                                                       |
|------------------------|--------------------------------------------------------------|
| Format                 | Manager Testimonial Style (scripted but authentic-feeling)   |
| Hook (first 3 seconds) | "I was losing 2 reps a month to churn. Here's what changed." |

**FULL VIDEO CONCEPT:**

1. Manager, direct to camera, serious tone
2. "Six months ago, I was losing two reps a month. Good reps. Trained reps. Reps I'd invested in."
3. "And every time I'd ask why they were leaving, it was the same thing: 'The doors are dead. I'm working my ass off and not closing anything.'"
4. "I thought it was a training problem. I hired a coach. Ran more ride-alongs. Better morning meetings."
5. "Didn't matter. Because the problem wasn't the pitch. The problem was the data."
6. "We were sending reps into territories with 40% rental rates. They were knocking dead doors all day and burning out."
7. "We switched to FirstKnock. Verified sold-home data. Optimized routes. Real-time team visibility."
8. "First month: close rate up [X%]. Rep churn: zero."
9. "Second month: [CLIENT] on our team had their best month ever. [RESULT]."
10. "The reps didn't get better. The doors got better. And when the doors get better, everything gets better."
11. "If you're losing reps to churn, look at your data before you look at your training."

**ON-SCREEN TEXT OVERLAYS:**

- "Losing 2 reps/month to churn"
- "Problem: dead doors, not bad reps"
- "Switched to FirstKnock"
- "Month 1: close rate up [X%]. Churn: zero."
- "Fix the doors. Fix the churn."

CAPTION: "Rep churn is a data problem, not a training problem. When you send good reps to knock dead doors all day, they leave. Fix the data, fix the churn. This is what happened when we switched to FirstKnock. #salesleadership #d2dsales #repchurn #doortodoor #firstknock #pestcontrol #homesecurity"

HASHTAGS: #salesleadership #d2dsales #repchurn #doortodoor #firstknock #pestcontrol #homesecurity #teambuilding #salesmanager #fieldops

CTA: "Managers — what's your monthly rep churn rate? Drop it below. Let's talk about it. "

**Week 4, Day 5 — Friday**

**Table B4c — Week 4 Day 5 Video Metadata**

| Element                | Detail                                                                                      |
|------------------------|---------------------------------------------------------------------------------------------|
| Format                 | Direct CTA / Offer Video (talking head, high energy, clear ask)                             |
| Hook (first 3 seconds) | "If you run a D2D team in pest control or security, I want to show you something for free." |

**FULL VIDEO CONCEPT:**

1. High energy, direct, fast-paced
2. "Quick one. If you run a D2D team — pest control, home security, solar, whatever — I want to show you what your territory looks like on the FirstKnock map."
3. "No pitch. No pressure. Just pull up your territory, show you the verified sold homes in your area, and let you see the data for yourself."
4. "Takes 15 minutes. You'll either see something that changes how you run your team, or you won't. Either way, you'll know."
5. "We've got [CLIENT] in pest control doing [RESULT] with this data. We've got security teams cutting their door-to-close ratio in half."
6. "Link in bio. Book a 15-minute map walkthrough. I'll show you your territory. You decide if it's worth it."
7. "FirstKnock. Know before you knock."

**ON-SCREEN TEXT OVERLAYS:**

- "D2D team in pest control or security?"
- "Free 15-min map walkthrough"
- "See your territory on the FirstKnock map"
- "No pitch. Just data."
- "Link in bio rightarrow"

CAPTION: "Pest control and security D2D managers — I want to show you what your territory looks like on the FirstKnock map. Free 15-minute walkthrough. No pitch. Just data. Link in bio to book. #pestcontrol #homesecurity #d2dsales #doortodoor #firstknock #salesleadership"

HASHTAGS: #pestcontrol #homesecurity #d2dsales #doortodoor #firstknock #salesleadership #fieldops #closers #salestech #freeoffer

CTA: "Link in bio. Book your free map walkthrough. 15 minutes. No pitch."

**B2. AI Automation Stack for Video Production**

**The Core Philosophy**

FirstKnock's content engine needs to produce 20+ videos per week with a lean team — ideally 1–2 people managing the pipeline. The goal is to maintain the brand's "sexy/gritty" aesthetic at scale without a full production crew. Here's the exact stack and workflow.

**Table B5 — AI Video Production Tool Stack**

| Tool               | Category      | Primary Use                                     | Key Advantage                                                      |
|--------------------|---------------|-------------------------------------------------|--------------------------------------------------------------------|
| Claude / GPT-4o    | Scripting     | Video scripts, hooks, captions, hashtag sets    | Batch 10–15 scripts per session; use structured prompt template    |
| HeyGen (primary)   | AI Avatars    | Talking head videos without filming             | Natural movement, better lip sync, custom avatar from 2-min sample |
| Synthesia (backup) | AI Avatars    | Backup avatar generation                        | Reliable fallback when HeyGen queue is long                        |
| ElevenLabs         | Voiceover     | POV videos, screen recordings                   | Clone voice from real team member; confident, fast-paced tone      |
| CapCut AI          | Video Editing | Auto-captions, overlays, transitions, beat sync | Handles 80% of editing; dark mode templates with neon accents      |
| Opus Clip          | Repurposing   | Long-form rightarrow short-form auto-clipping   | Takes webinars/demos and generates 10–15 short clips automatically |
| Buffer / Later     | Publishing    | Schedule 3–5 posts/week per platform            | Cross-post TikTok to Instagram Reels automatically                 |

**Scripting Prompt Template**

PROMPT TEMPLATE: "Write a 60-second TikTok script for a D2D sales audience in the pest control vertical. Brand voice: aggressive, hustle-culture, disruptive. Hook must stop a thumb mid-scroll. Topic: [insert topic]. Include on-screen text overlay suggestions."

**The Exact Workflow: Script to Published in Under 2 Hours**

1. STEP 1 — Script Generation (15 min): Open Claude/GPT. Use the batch scripting prompt. Generate 5–7 scripts at once. Review, edit for brand voice, approve top 3–4.
2. STEP 2 — Avatar/Voiceover Generation (20 min): For talking head scripts: upload to HeyGen, select avatar, generate video. For POV/screen record scripts: generate ElevenLabs

voiceover,      download MP3.

3. **STEP 3 — Visual Assembly (30 min):** Import avatar video or screen recording into CapCut. Add ElevenLabs voiceover if needed. Apply dark mode template. Add text overlays from script. Add brand logo/watermark. Sync to music (royalty-free high-energy tracks from CapCut library).
4. **STEP 4 — Caption & Hashtag Generation (10 min):** Use Claude to generate caption + hashtag set for each video. Review and approve.
5. **STEP 5 — Schedule (5 min):** Upload to Buffer/Later. Schedule for optimal posting times. Done.

Total time per video: ~80 minutes end-to-end. With batching, produce 5–7 videos in a 4–5 hour session.

## Maintaining the "Sexy/Gritty" Aesthetic at Scale

**Table B6 — Aesthetic & Production Rules**

| Rule Category | Rule             | Specification                                                                   |
|---------------|------------------|---------------------------------------------------------------------------------|
| Visual        | Background       | Always dark mode — black or near-black (#0A0A0A)                                |
| Visual        | Accent Colors    | Electric green (#00FF88) or hot pink (#FF3366) for text overlays and highlights |
| Visual        | Font             | Bold, sans-serif (Montserrat Bold or similar) — never script fonts              |
| Visual        | Aesthetic        | No stock photo energy — everything should feel raw, real, field-level           |
| Visual        | Avatar Wardrobe  | Field-appropriate clothing (polo, vest) — not suits                             |
| Audio         | Background Music | High-energy — trap beats, electronic, anything with momentum                    |
| Audio         | Voiceover Tone   | Rep talking to another rep — not a marketer talking to a prospect               |
| Audio         | Pace             | Fast — no dead air, no filler words                                             |
| Content       | App UI           | Always show the app UI — dark mode, real interface, not mockups                 |

|         |                 |                                                                     |
|---------|-----------------|---------------------------------------------------------------------|
| Content | Rep Stories     | Specific and real — use specific numbers, specific door counts      |
| Content | Manager Content | Authoritative, not salesy                                           |
| Content | Captions        | Auto-caption everything — 85% of TikTok/Reels watched without sound |

## Batch Production Strategy: 20+ Videos Per Week

**Table B7 — Weekly Batch Production Schedule**

| Day       | Time Block | Activity                                                                                                                                   | Output                          |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| Monday    | 2 hours    | Script Day — Generate 20–25 scripts using Claude. Categorize by type: talking head, POV, skit, screen record, manager POV. Approve top 20. | 20 approved scripts             |
| Tuesday   | 4 hours    | Production Day 1 — Generate 10 avatar videos in HeyGen. Generate 5 voiceovers in ElevenLabs. Edit 8–10 videos in CapCut.                   | 8–10 edited videos              |
| Wednesday | 4 hours    | Production Day 2 — Edit remaining 10 videos. Generate all captions and hashtags. QC review.                                                | 10 edited videos + all captions |
| Thursday  | 1 hour     | Schedule Day — Upload all 20 videos to Buffer/Later. Schedule across the week for TikTok and Instagram Reels.                              | 20 videos scheduled             |
| TOTAL     | ~11 hours  | Full week of content — 2 people                                                                                                            | 20 published videos/week        |

**RESULT:** 20 published videos per week, 2 people, ~11 hours of total work.

# C1. Cold Email Sequence #1 — Pest Control Agency Owners

Table C1 — Pest Control Email Sequence Overview

| Attribute       | Detail                                                                            |
|-----------------|-----------------------------------------------------------------------------------|
| Goal            | Book a 15-minute demo                                                             |

| Sequence Length | 3 emails                                                                          |
| Cadence         | Email 1 rightarrow Day 0   Email 2 rightarrow Day 3<br>  Email 3 rightarrow Day 8 |

## Email 1 — Pattern Interrupt / Pain Agitation

**SUBJECT LINE: your reps are knocking rentals right now**

Quick question — do you know what percentage of the doors your reps knocked today were rentals?

Most pest control operators I talk to don't. And when they actually run the numbers, it's usually somewhere between 35–50%.

That means nearly half your team's day is spent pitching people who literally cannot buy from you. They don't own the home. They can't authorize a pest control contract. They're a dead end.

And your reps feel it. That's why they're burning out. That's why your best closers are starting to wonder if the doors are worth it.

I built something that fixes this. It's called FirstKnock — it's a field intelligence platform that gives D2D pest control teams a map of only verified, recently sold homes in their territory. Every door on the map is a homeowner who just moved in. No rentals. No non-decision makers. Just buyers.

New homeowners are 3–5x more likely to sign a pest control contract in their first 90 days. They don't know the pest history of their new home. They're anxious. They're buying.

Worth 15 minutes to see what your territory looks like on the map?

— [Name]FirstKnock

*P.S. — I'm not going to pitch you on a call. I'm going to pull up your territory, show you the verified sold homes in your area, and let you decide if the data is worth it.*

## Email 2 — Social Proof (Send Day 3)

**SUBJECT LINE: what [CLIENT] did with this data**

Didn't hear back — figured I'd share a quick story.

[CLIENT] runs a pest control team in [MARKET]. Before FirstKnock, their reps were knocking

80–100 doors a day and closing maybe 1–2 contracts. Standard D2D numbers.

They switched to FirstKnock. Filtered their territory to only verified sold homes — homeowners who'd moved in within the last 60 days. Their reps went from knocking 100 cold doors to knocking 30–40 verified homeowner doors.

Result: [RESULT]. Close rate up [X%]. Rep churn dropped to near zero in the first 60 days.

The pitch didn't change. The doors changed.

I want to show you the same thing for your territory. 15 minutes on a screen share — I pull up your market, show you the sold-home density, and you tell me if it's worth a deeper conversation.

No contract. No commitment. Just data.

Are you open to a quick look?

— [Name]FirstKnock

### Email 3 — The Breakup (Send Day 8)

**SUBJECT LINE: closing your file**

I'm going to stop following up after this one.

Either the timing isn't right, or knocking rentals and non-homeowners isn't a problem you're trying to solve right now. Both are valid.

If that changes — if you start losing reps to churn, or your close rates drop, or you just get tired of watching your team grind dead doors — FirstKnock will still be here.

One last thing: if you've got a competitor in your market who's already using verified sold-home data, you'll know it within 90 days. They'll be closing the new homeowners before your reps even find the street.

If you want to see the map before that happens, reply to this email. I'll get you on a 15-minute walkthrough this week.

If not — good luck out there. Genuinely.

— [Name]FirstKnock

## C2. Cold Email Sequence #2 — Smart Home Security Team Managers

**Table C2 — Security Email Sequence Overview**

| Attribute       | Detail                                                                            |
|-----------------|-----------------------------------------------------------------------------------|
| Goal            | Book a 15-minute demo                                                             |
| Tone            | Peer-to-peer, operator-to-operator                                                |
| Sequence Length | 3 emails                                                                          |
| Cadence         | Email 1 rightarrow Day 0   Email 2 rightarrow Day 3<br>  Email 3 rightarrow Day 8 |

## Email 1 — Pattern Interrupt / Pain Agitation

**SUBJECT LINE: your reps are missing the best security buyers in your market**

Here's something most security managers don't think about:

New homeowners are the #1 buyer segment for home security systems. They just moved into an unfamiliar neighborhood. They don't know the area. They've got a family to protect. They are actively thinking about security — often before they've even finished unpacking.

Now here's the problem: most D2D security teams have no way to systematically target new homeowners. They're working generic lists, knocking whatever neighborhood the manager assigned, and hoping to stumble onto a buyer.

Meanwhile, in your market right now, there are homeowners who moved in 2, 3, 4 weeks ago who haven't set up security yet. They're sitting there, in a new home, in an unfamiliar neighborhood, waiting for someone to knock their door and solve their problem.

Your reps just don't know which doors they are.

FirstKnock fixes that. It's a field intelligence platform that gives security teams a real-time map of verified, recently sold homes — every door on the map is a homeowner who just moved in. Your reps stop knocking blind and start walking up to the highest-intent buyers in your market.

Worth 15 minutes to see what your territory looks like?

— [Name]FirstKnock

*P.S. — New homeowners are 4–6x more likely to buy a security system in their first 90 days than established residents. The window is short. FirstKnock puts your reps at those doors before it closes.*

## Email 2 — Social Proof (Send Day 3)

**SUBJECT LINE: [CLIENT]'s security team cut their door-to-close ratio in half**

Quick follow-up with a story that might be relevant.

[CLIENT] manages a security team in [MARKET]. Before FirstKnock, their reps were doing what most security teams do — working a territory, knocking whatever doors were on the list, dealing with a lot of renters and non-decision makers.

They switched to FirstKnock. Started filtering their territory to only homes sold in the last 60 days.

Reps went from knocking 80–100 cold doors to knocking 25–35 verified new homeowner doors per day.

[RESULT]. Door-to-close ratio improved by [X%]. And rep morale went up — because when you're knocking doors where the person who answers is actually a buyer, the job feels different.

The pitch didn't change. The targeting changed.

I want to show you the same thing for your territory. 15 minutes — I pull up your market on the FirstKnock map, show you the new homeowner density, and you tell me if it's worth a deeper conversation.

Open to a quick look?

— [Name]FirstKnock

### Email 3 — The Breakup (Send Day 8)

**SUBJECT LINE: last one from me**

Last email, I promise.

If the timing isn't right or this isn't a priority, I get it. No hard feelings.

But I'll leave you with this: in your market right now, there are new homeowners who just moved in and haven't set up security yet. They're the highest-intent buyers you'll ever knock. And they're sitting there waiting.

The question is whether your reps find them first, or your competitor's reps do.

If you want to see the map before that happens, reply to this email. I'll get you a 15-minute walkthrough this week — no pitch, just data.

If not — good luck out there.

— [Name]FirstKnock

## C3. 60-Second Cold Call Script — D2D Team Managers (Any Vertical)

**Table C3 — Cold Call Script Overview**

| Attribute | Detail                                              |
|-----------|-----------------------------------------------------|
| Goal      | Book a same-call calendar slot for a 15-minute demo |
| Target    | D2D Team Managers — Pest Control or Security        |
| Tone      | Confident, fast, peer-to-peer — not a vendor pitch  |

### The Opening

[RING — ANSWER]

Rep: "[Their name] — quick question before you hang up: do you know what percentage of the

doors — your team knocked today were rentals?"

*[PAUSE — let them respond or react]*

Rep: "Most managers I talk to don't track it. Turns out it's usually 35–50%. Which means your reps are spending half their day pitching people who literally cannot buy from you."

## **If They Ask "Who Is This?" or "What's This About?"**

Rep: "Sorry — [Your name], FirstKnock. We built a field intelligence platform for D2D teams. 10 seconds — we give your reps a real-time map of only verified, recently sold homes in their territory. Every door on the map is a homeowner who just moved in. No rentals. No non-decision makers. Your reps stop knocking blind and start knocking buyers."

*[PAUSE]*

Rep: "I want to show you what your territory looks like on the map. Takes 15 minutes on a screen share. I pull up your market, show you the sold-home density, you tell me if the data is worth a deeper conversation. No pitch. Just data."

## **Objection Handler: "We Already Have a List Provider"**

Rep: "I hear that a lot. Quick question — does your list provider filter out rentals in real time? And does it show you homes that sold in the last 30–60 days specifically?"

*[If they say no or hesitate]*

Rep: "That's the difference. FirstKnock isn't a list — it's a live targeting system. We pull from real-time MLS and property data, run it through a verification pipeline that filters out rentals and non-decision makers, and surface only the homes that recently changed hands. Your list provider is giving you homeowners. We're giving you new homeowners — the ones who just moved in and are actively buying. That's a completely different conversion profile."

*[PAUSE]*

Rep: "I'm not asking you to replace anything. Just let me show you the map for your territory. 15 minutes. If it doesn't show you something your current provider can't, I'll leave you alone."

## **The Close**

Rep: "I've got time Thursday at 2pm or Friday morning at 10am. Which works better for a 15-minute screen share?"

*[If they push back on timing]*

Rep: "I can work around your schedule. What's a 15-minute window that works for you this week? I'll send a calendar invite right now while we're on the phone."

*[Book it. Confirm name, email, vertical. Send invite before hanging up.]*

Rep: "Perfect. I'm sending the invite now — you'll see it in your inbox in about 30 seconds. I'll pull up your territory before the call so we can jump straight into the data. Talk [day]."

RULE: Never hang up without a booked calendar slot or a hard no. If they say "send me some

info," respond: "I'd rather just show you the map — it's faster and more useful than anything I could send. What's a 15-minute window this week?"

# MODULE D: SCALING & AUTOMATION ARCHITECTURE

## D1. Full Tech Stack Recommendation

### Cold Outreach Automation: Smartlead vs. Instantly vs. Lemlist

RECOMMENDATION: Smartlead — wins on deliverability infrastructure, sequence flexibility, and pricing at scale.

Table D1 — Cold Outreach Tool Comparison

| Dimension                     | Smartlead                                                                                                                    | Instantly                                          | Lemlist                                                  |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|----------------------------------------------------------|
| Deliverability Infrastructure | Best-in-class mailbox rotation + warm-up. Most robust for small business email domains with aggressive spam filters.         | Competitive but less sophisticated warm-up system. | Good but less focused on deliverability at scale.        |
| Sequence Flexibility          | Conditional branching (send Email 2 only if Email 1 opened but not replied). Critical for the 3-email sequences in Module C. | Linear sequences only — no conditional logic.      | Some conditional logic but less powerful than Smartlead. |
| Pricing at Scale              | Most favorable as mailboxes and contacts scale.                                                                              | Competitive but limited conditional logic.         | Per-seat model gets expensive fast.                      |
| Verdict                       | RECOMMENDED                                                                                                                  | Backup option                                      | Not recommended at scale                                 |

### Smartlead Setup for FirstKnock

- 3–5 sending mailboxes per vertical (Pest Control, Security)
- Warm up new mailboxes for 2–3 weeks before launching sequences
- Send limit: 30–40 emails per mailbox per day
- Total daily send capacity: 150–200 emails across 5 mailboxes
- Use the Module C sequences as the core email content

**RECOMMENDATION:** Close.io — built for outbound sales, optimized for speed, best reporting for lean early-stage teams.

**Table D2 — CRM Tool Comparison**

| Dimension          | Close.io                                                                                                          | HubSpot                                                          | Pipedrive                                                    |
|--------------------|-------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|--------------------------------------------------------------|
| Built for Outbound | Native power dialer, email sequences, activity tracking — no integrations needed.                                 | Requires integrations and workarounds for outbound-heavy motion. | Outbound features are limited; better for inbound-led teams. |
| Speed              | UI optimized for speed — log call, send follow-up, schedule demo in under 60 seconds.                             | Powerful but slower UI; more setup required.                     | Fast UI but weaker reporting.                                |
| Reporting          | Metrics that matter for early-stage SaaS outbound: call volume, open rates, demo booking rate, pipeline velocity. | More powerful but requires significant setup time.               | Weakest reporting of the three.                              |
| Cost               | Startup plan significantly cheaper than HubSpot Sales Hub at comparable                                           | Most expensive at comparable feature sets.                       | Mid-range pricing.                                           |
| Verdict            | RECOMMENDED                                                                                                       | Revisit at Series A if inbound motion scales                     | Not recommended                                              |

## Ad Retargeting: Meta + Google Setup

### Meta (Facebook/Instagram) — Audience Strategy

#### RETARGETING AUDIENCES:

- Website visitors (all pages) — 30-day window
- Website visitors (pricing page) — 14-day window (highest intent)
- Video viewers (watched 50%+ of any FirstKnock video) — 60-day window
- Email list upload (Smartlead contacts who opened but didn't reply)

#### COLD PROSPECTING AUDIENCES:

- Lookalike audience (1%) based on existing customers

- Interest targeting: "door-to-door sales," "pest control business," "home security business," "sales management," "field sales"
- Job title targeting: "Sales Manager," "Branch Manager," "Regional Manager," "Owner" + industry: "Pest Control," "Security Systems"
- Behavior: Small business owners, business decision makers

Table D3 — Meta Creative Format Guide

| Creative Format                                      | Use Case                                                      | CTA                       |
|------------------------------------------------------|---------------------------------------------------------------|---------------------------|
| Retargeting: Single image or short video (15–30 sec) | Use the "math" hook or before/after concept                   | "Book a Free 15-Min Demo" |
| Prospecting: Video (30–60 sec)                       | Use the POV or talking head content from the content calendar | "See How It Works"        |

Google — Search & Retargeting Strategy

SEARCH CAMPAIGN KEYWORDS:

- "door to door sales software"
- "D2D sales app"
- "pest control sales software"
- "home security sales software"
- "door knocking app"
- "field sales management software"
- "D2D CRM"
- Match type: Phrase and exact match — avoid broad match at this stage
- Bid strategy: Target CPA once you have 30+ conversions; manual CPC to start

DISPLAY/YOUTUBE RETARGETING:

- Retarget website visitors with 15-second pre-roll ads on YouTube
- Use the "math" video or the "rental trap" skit as pre-roll creative
- Display retargeting: dark mode banner ads with neon accents — "Know Before You Knock" headline

Table D4 — Ad Budget Allocation Guide (Early Stage)

| Channel          | Budget Allocation | Monthly Spend (at \$5K total) | Priority Rationale                                       |
|------------------|-------------------|-------------------------------|----------------------------------------------------------|
| Meta Retargeting | 30%               | \$900–\$1,500                 | Highest ROI at early stage — warm audiences convert      |
| Meta Prospecting | 25%               | \$750–\$1,250                 | Build awareness with cold lookalike + interest audiences |

|                            |      |                    |                                                               |
|----------------------------|------|--------------------|---------------------------------------------------------------|
| Google Search              | 35%  | \$1,050–\$1,750    | Captures high-intent searchers actively looking for solutions |
| Google/YouTube Retargeting | 10%  | \$300–\$500        | Reinforce brand with video pre-roll to warm audiences         |
| TOTAL                      | 100% | \$3,000–\$5,000/mo | Scale channels producing demos under \$150 CAC; cut the rest  |

## Lead Enrichment: Clay.com Workflow

**GOAL:** Build targeted prospect lists of Pest Control and Security agency owners/managers for cold outreach.

### Step 1 — Source Building

In Clay, create a new table. Use the following data sources to populate the initial prospect list:

- LinkedIn Sales Navigator export (job titles: Owner, Sales Manager, Branch Manager, Regional Manager; industries: Pest Control, Security Systems, Alarm Systems)
- Apollo.io integration in Clay — search by industry NAICS code (561710 for Pest Control, 561621 for Security Systems) + company size (5–200 employees) + geography (target markets)
- Crunchbase for funded companies in the space (signals growth = more likely to invest in tools)

### Step 2 — Enrichment Waterfall

For each prospect, run the following enrichment in Clay:

1. Email finding: Waterfall — Apollo → Hunter.io → Prospeo → Datagma (use all four in sequence, stop when valid email found)
2. Phone finding: Datagma or Prospeo for mobile numbers (critical for cold call outreach)
3. LinkedIn profile: Enrich with LinkedIn URL, headline, recent posts (signals activity and pain points)
4. Company enrichment: Employee count, revenue estimate, website, tech stack (use BuiltWith integration to see if they're using any competitor tools)
5. Recent news/signals: Use Clay's Perplexity integration to search for recent news about the company — hiring signals, expansion, new markets

### Step 3 — Scoring & Segmentation

#### Table D5 — Clay Prospect Scoring Model

| Signal                              | Score     | Rationale                                                                         |
|-------------------------------------|-----------|-----------------------------------------------------------------------------------|
| Company size 10–50 employees        | +2 points | Sweet spot for FirstKnock — large enough to need tools, small enough to move fast |
| Owner/founder title                 | +3 points | Decision maker — no procurement process                                           |
| Recent hiring activity (sales reps) | +2 points | Scaling = needs better tools                                                      |
| No current sales tech in stack      | +2 points | Greenfield opportunity — no displacement needed                                   |
| Competitor tech in stack            | +1 point  | Already aware of the category — easier to sell                                    |

## Step 4 — Export to Smartlead

Filter for prospects with score 5+. Export to CSV. Import into Smartlead with appropriate sequence (Pest Control sequence or Security sequence from Module C). Tag by vertical for reporting.

Estimated output: 200–400 qualified, enriched prospects per week with valid emails and phone numbers.

## Content-to-Social Automation: Make.com Workflow

**GOAL:** Take product usage signals or customer wins and auto-draft Twitter/X threads and LinkedIn posts.

### TRIGGER OPTIONS:

- New "Closed Won" deal logged in Close.io
- Rep logs a "Sold" outcome in FirstKnock app (via webhook)
- Customer hits a milestone (e.g., 100 doors knocked, first week close rate above X%)

## The Full Workflow (Built in Make.com)

1. STEP 1 — TRIGGER: Close.io webhook fires when deal status changes to "Closed Won." Payload includes: customer name, vertical, deal value, market/territory, any notes logged.
2. STEP 2 — DATAEXTRACTION: Make.com parses the webhook payload. Extracts: company name, vertical (Pest Control or Security), deal size, rep name (if available), any performance metrics in the notes.
3. STEP 3 — AI DRAFT GENERATION: Make.com sends extracted data to Claude API (or GPT-4o API) with the following prompt: "You are a content writer for FirstKnock, a field intelligence platform for D2D sales teams. Brand voice: aggressive, hustle-culture, disruptive. Write two pieces of content based on this customer win: [insert extracted data]. Output 1: A Twitter/X thread (5–7 tweets) celebrating the win and extracting a lesson for D2D managers.

Output 2: A LinkedIn post (150–200 words) with a professional but punchy tone. Use [CLIENT] as placeholder for company name. Include relevant hashtags."

- 4. STEP 4 — HUMAN REVIEW QUEUE: Make.com creates a new card in a Trello board (or Notion database) titled "Content Draft — [Date] — [Vertical]." Card includes both drafts, the raw data, and a "Approve / Edit / Reject" status field. Content manager reviews and approves within 24 hours.
- 5. STEP 5 — PUBLISH: Approved content is pushed to Buffer via Make.com integration. Scheduled for optimal posting time (Twitter: 8am or 12pm; LinkedIn: Tuesday–Thursday 8–10am). Published automatically.

D2. Sample Auto-Generated Content Templates

Sample Twitter/X Thread — FirstKnock Customer Win

Table D6 — Sample Twitter/X Thread Template

| Tweet #        | Full Tweet Copy                                                                                                                                                                                          |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tweet 1 (Hook) | A pest control team in [MARKET] just had their best month ever. Here's exactly what changed (and it wasn't their pitch):                                                                                 |
| Tweet 2        | Before FirstKnock: 80–100 doors per day. ~40% rentals. Reps pitching people who couldn't buy. Close rate: [X%]. Rep churn: 2/month.                                                                      |
| Tweet 3        | After FirstKnock: 30–40 doors per day. 100% verified homeowners. All recently moved in. Same pitch. Different doors.                                                                                     |
| Tweet 4        | Result: [RESULT]. Close rate up [X%]. Rep churn: zero in 60 days. And the reps stopped complaining about the doors.                                                                                      |
| Tweet 5        | The lesson: D2D close rate is a data problem before it's a training problem. You can't pitch your way out of bad doors.                                                                                  |
| Tweet 6        | New homeowners are 3–5x more likely to sign a pest control contract in their first 90 days. FirstKnock puts your reps at those doors. Every time.                                                        |
| Tweet 7 (CTA)  | If you run a D2D pest control or security team and you're tired of watching your reps grind dead doors — link in bio. 15-minute map walkthrough. No pitch. Just data. #pestcontrol #d2dsales #firstknock |

A pest control team we work with just had their best month ever.

They didn't hire new reps. They didn't change their pitch. They didn't run a new incentive program. They changed their doors.

Before FirstKnock: 80–100 doors per day, ~40% rentals, reps burning out on non-decision makers.

After FirstKnock: 30–40 verified homeowner doors per day — every single one a homeowner who moved in within the last 60 days.

[RESULT]. Close rate up [X%]. Rep churn dropped to zero in the first 60 days.

Here's the thing most D2D operators miss: close rate is a data problem before it's a training problem. You can invest in the best coaching, the best scripts, the best morning meetings — and if your reps are knocking rentals and non-decision makers, none of it moves the needle.

Fix the doors. The closes follow.

If you run a D2D team in pest control or home security and you want to see what your territory looks like on the FirstKnock map — DM me. 15 minutes. No pitch. Just data.

## APPENDIX: QUICK REFERENCE — BRAND VOICE GUIDELINES

### The FirstKnock Voice in One Sentence:

"We're the closers who figured out the cheat code, and we're telling you about it because we want you to win — and because when you win with our data, we win too."

### Always Do

- Write like a rep talking to another rep, not a marketer talking to a prospect
- Use specific numbers (even if placeholder) — "40 doors" not "fewer doors"
- Agitate the pain before presenting the solution
- Make the old way look stupid (but not in a way that insults the prospect — they're doing the old way)
- End with a clear, single CTA
- Reference the specific vertical (pest control or security) — never generic "D2D"

### Never Do

- Corporate language ("leverage," "synergize," "holistic approach")
- Soft CTAs ("feel free to reach out if you're interested")
- Long paragraphs in emails — 2–3 sentences max per paragraph
- Passive voice

- Hedging language ("might," "could potentially," "may help")

## Voice Calibration Reference

Table A4 — Brand Voice Calibration: Wrong vs. Right

| Wrong (Corporate)                                                | Right (FirstKnock)                                                                                   |
|------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| "Leverage our platform to optimize your field sales operations." | "Stop knocking rentals. Every door on the FirstKnock map is a verified homeowner who just moved in." |
| "Our solution may help improve your team's close rate."          | "100 cold doors = 1 close. 40 FirstKnock doors = 8 closes. Same rep. Same pitch. Different map."     |
| "Feel free to reach out if you'd like to learn more."            | "Link in bio. Book your free map walkthrough. 15 minutes. No pitch."                                 |
| "We offer a holistic approach to door-to-door sales management." | "This is a targeting system. Not a list. Not a spreadsheet. A weapon."                               |
| "Our platform could potentially reduce rep churn."               | "Fix the doors. Fix the churn. First month on FirstKnock: churn zero."                               |

## Placeholder Reference Guide

Table A5 — Placeholder Reference Guide

| Placeholder | Replace With                  | Example                            |
|-------------|-------------------------------|------------------------------------|
| [CLIENT]    | Real customer company name    | "Apex Pest Solutions"              |
| [RESULT]    | Specific measurable outcome   | "Closed 47 contracts in 30 days"   |
| [X%]        | Actual percentage improvement | "Close rate up 34%"                |
| [MARKET]    | Specific city or region       | "Phoenix, AZ" or "Southeast Texas" |

### Document End — FirstKnock GTM & Content Generation Engine

*All scripts, hooks, and frameworks are production-ready. Replace [CLIENT], [RESULT], [X%], and [MARKET] placeholders with real customer data as it becomes available.*
